

Streetscape Enhancements Elkins Park, PA

KMS teamed with Carroll Engineering Corporation to assist with this project. Initially, KMS was asked to provide support with street furniture selection, lighting design and sidewalk design for this inner ring suburban community located along the Southeastern Pennsylvania Transportation Authority's (SEPTA) northern Regional Rail line serving eastern Montgomery and Upper Bucks Counties.

As the project developed, KMS played a strong role in landscape architectural design, presentation graphics and assisting the engineer and township in preparing for and conducting public input meetings.

KMS had a key role in:

- Selecting and specifying locations for appropriate street furniture
- Selecting and specifying light fixtures and preparing point by point lighting studies
- Designing pavement patterns with concrete pavers
- Recommending and specifying street trees, shrubs and other landscape elements
- Preparing presentation graphics
- Presenting design recommendations at public input meetings
- Assuring that sidewalk designs met all federal requirements for access by persons with disabilities.
